THE BETTER WAY OF DOING BUSINESS

Welcome to Safe Harbor, your source for safety access and fall protection equipment. Prepare yourself for a better way to do business. We are a customer driven company where trust, reliability, and quality are more than just buzz words. It is our corporate philosophy.

Our staff is committed to earning your trust as a reliable business partner. We provide solutions when you need them, superior quality products, and on time delivery.

WHAT WE DO

Safe Harbor provides bulk loading solutions to the process industries including petrochemical, food processing, pharmaceutical and mining.

From on-site evaluation of bulk loading areas for compliance with OSHA standards to recommendations of customized fall protection, Safe Harbor will be your solutions partner.

We can guide you from project definition through installation to make your project a success.
FEATURES / BENEFITS – TLS AND FLT

1 ¼” SCH. 40 pipe provides added comfort and increased strength

Oversized safety yellow top and midrails provide operator comfort and high visibility

Locking extension

Spring counter balance with chemical resistant cover

Easy adjust spring

Galvanized base tread provides added strength

22” extension with machined rollers allows for effortless operation (TLS model only)

Open serrated walk surface helps to maximize footing and minimize water, product, and ice accumulation

4 bolt flange bearing provides strength and ease of movement. Designed for high usage (main pivot point only)

Modular base tread allows for quick installation helping to minimize downtime.
FEATURES / BENEFITS – SLT

Double extended end tread provides operator larger safe zone and helps to eliminate the operator from having to stand on top of the vehicle.

Oversized safety yellow top and midrails provide operator comfort and high visibility.

Oil impregnated bronze bushings at all intermediate pivot points provides smooth operation and extends gangway life.

Self leveling treads allow access 40° above or below horizontal.

Industrial rubber "D" bumper protects the vehicle from damage.

Galvanized base tread provides added strength.

Open serrated walk surface helps to maximize footing and minimize water, product, and ice accumulated.

4 bolt flange bearing provides strength and ease of movement. Designed for high usage (main pivot point only).

Pneumatic and hydraulic assist available (all models). Spring counter balance standard.

Modular base tread allows for quick installation helping to minimize downtime.
TELESCOPING GANGWAY

Primarily used for railcar applications where vehicle height is fairly uniform. Our telescoping extension helps to close the gap for narrow railcars.

- Working range of 15 degrees below horizontal and 15 degrees above horizontal
- Equipped with our standard 22” telescoping extension
- Self supporting with a 500lb. load capacity
**FLAT RAMP GANGWAY**

Our FLT model is a flat ramp gangway. Primarily used for hopper car and hopper truck applications where vehicle height is uniform.

- Working range of 15 degrees below horizontal and 15 degrees above horizontal
- Self supporting with a 500lb. load capacity
SELF LEVELING TREAD GANGWAY

Engineered with the most versatility to accommodate variations in height that typically occur while accessing liquid tank trucks.

- Working range of 45 degrees below horizontal and 50 degrees above horizontal
- Self supporting with a 500lb. load capacity
- 4 bolt nickel plated flange bearing at the main pivot point
- Double end tread provides the operator with a larger work surface
**GANGWAY OPTIONS**

**TRACKING**
- Allows the gangway to track along the face of platform. Primarily used for multiple hatch vehicles and multiple coupled railcars.

**POWERED**
- Available in pneumatic or hydraulic.

**PIVOT MOUNT**
- Allows the gangway to pivot for variations in vehicle spotting.
WIDE GANGWAYS
TANK CAR FALL PROTECTION
TANK TRUCK FALL PROTECTION
HOPPER TRUCK/HOPPER CAR FALL PROTECTION
PARALLEL APPROACH

- Ideal for use in applications where multiples hatches on a truck or railcar need to be accessed.
- Designed for either truck or railcar applications.
- Units have two working ranges: 9’-6” to 13’-6” and 11’-6” to 15’-6”.
- Unit is fitted with a customized safety cage for your specific requirement.
- Portable access units are designed for effortless one person operation and are easy to maneuver.
- Portable access units have 18” foam filled tires which results in portable access units that are always ready for use.
- Standard units are free standing and have a 500 LB load capacity.
- Units have self leveling jacks and wheel break for additional safety.
PTA STANDARD

STANDARD.PERPENDICULAR APPROACH

- Portable access unit runs perpendicular to vehicle.
- Portable access units can be designed for either truck or railcar applications.
- Standard portable access units have two working ranges: 9'-6" to 13'-6" and 11'-6" to 15'-6".
- Units have an automatic self-breaking winch with backup locking pins.
- Ideal for use where vehicles need to be safely accessed in different locations.
- Units can also be powered and self-propelled.
- Units can be designed to move with fork lift pockets. Units can also be designed to be pulled behind site trucks at low speed.
LT RACK

- Standard design for expedited deliveries and easy installation
- Platforms sizes available in 3’ x 5’ and 4’ x 6’
- Available in three heights for truck and rail cars
- Single sided and double sided galvanized steel construction
CANOPY SYSTEMS
LOADING ARMS
FALL PROTECTION SYSTEMS
Marine access systems are custom designed for each specific application/site to accommodate variations in tides and ship/berge styles.
LOADING RACKS
SPILL CONTAINMENT

- Designed for the containment of drips and spills and to meet requirements for environmental regulations.
- Rugged construction for industrial applications.
- Standard cross walk provides a sure footed passage across the pan system.
- Available in aluminum, stainless steel, galvanized steel or mill steel finishes.
- Sloped middle pan and outside pans tie together to a common cross drain at center.
